

# DECKLOK CALCULATOR

To calculate number of brackets:

## LEDGER BOARD

Number of deck joists minus 2 = \_\_\_\_\_ ; divide by 2= \_\_\_\_\_

- Hold brackets to within three feet of each end
- No more than 8 feet between brackets
- Minimum of two sets of brackets per ledger

(Double the above number if brackets are also to be installed on deck joists)

## RAILING POSTS

\_\_\_\_\_  
Number of rail posts + number of railing corner posts =  
\_\_\_\_\_

## STAIR STRINGERS

\_\_\_\_\_  
Number of sets of stairs on deck  $\times 2 =$   
\_\_\_\_\_

Total the numbers for each section for the number of brackets needed for your complete project.

\_\_\_\_\_
